

IN THE ABSTRACT OF THE DISCLOSURE

Please amend the Abstract by rewriting same to read as follows.

A1
A user presets as key information in a PC certain information, such as the user's favorite program categories and artist names. A receiver receives a digital radio broadcast in which additional information is multiplexed with audio information. The received additional information is transferred to the PC via a communications device. The PC determines whether the preset key information is included in the additional information. If the key information is included, the additional information is stored in a storage device as an additional information file. The arrangement may be such that when a connection is established between the receiver and the PC via the communications device, the key information is transmitted from the PC to the receiver so that additional information can be selected on the receiver.

IN THE CLAIMS

Please amend claims 1-56 by rewriting same to read as follows.

A2
--1. (Amended) A method of storing additional information, comprising the steps of:
